A PAIR OF PROCESSES

Now and then I overhaul some old process once in use and see what can be done to make it work.

Op Pro by Dup and Forgetting are a pair that recently showed up as having a possible specific value—i.e., to create a specific effect upon a specific difficulty.

Evidently Admiration and Critical are a dichotomy. Maxine Kozak suggests that Duplication is Admiration. From this I looked over Critical on the APA (OCA) profile and saw that the low critical might be influenced by Op Pro by Dup. A test should be made of this.

The other process is less nebulous in action. The specific for a bad memory is Forgetting run in Brackets. You will ordinarily find an automaticity of forgetting when you ask "Recall something you wouldn't mind other people forgetting." This is a "bad memory". Nothing like a good conscience to retain a good memory.

The commands of Forgetting would be a 6-way bracket.

Recall (or think of) something you wouldn't mind

1. Forgetting yourself
2. Another person forgetting
3. Forgetting about another
4. Another forgetting about you
5. Other people forgetting
6. Another person forgetting about another person.

Each command is cleared. The commands are run in sequence rather than repetition.

This is a low scale process. Goes lower than "Not know" but graduates into it.

This is a basic on unknowns and fields of whatever kind.

CLEARING REALITY

A new rule.

In the absence or unreality of a terminal the significance in a process will not function.

In other words, the significance of help will not function on a tooth unless the pc is given a reality on the terminal of a tooth.

On a nervous-dispersed case, there is no real gain in running significance until hellos and okays are run on something.

Command "You say hello to that body."

"Have the body say okay to that hello."

"Have the body say hello to you."

"You say okay to that hello."

When pc has misemotion off the interchange, then run help in brackets on the same terminal.

Establish the reality of a terminal before you try to clear it with significance.

A pc in extreme pain can be audited if one clears reality on the hurting terminal and then runs brackets in help on that terminal. Note: Extreme control must be used in attempting this.

The above applies to objective terminals. Subjective might or might not work.
